Canadian Citizen | Fluent in French and English | Based in Montreal

SUMMARY

Computer Science student (BSc, graduating December 2026) who writes, tests and reviews code across Python, TypeScript/JavaScript, Java, C++, C# and SQL, and builds with AI coding agents every day. When an agent gets something wrong, I verify its sources, research independently and redirect it with a different approach. Experienced in code reviews, unit, integration and acceptance testing, debugging, and explaining technical decisions clearly in writing. Fluent in French and English. Available remotely and on a flexible schedule.

TECHNICAL SKILLS

Languages: Python (FastAPI), TypeScript, JavaScript, Java, C++, C#, SQL; object-oriented programming, data structures and algorithms (A+)

AI and LLMs: Claude Code, Codex, CLAUDE.md project instructions, Anthropic Claude API (prompts, vision OCR, LLM-driven evaluation), multi-agent pipelines (graph orchestration, function calling, schema validation, self-correction), verifying agent output

Code Quality: Code reviews and pull requests, unit testing (Jest, PyTest), integration testing, BDD acceptance testing (Cucumber), debugging (including memory bugs in C++), error handling and data validation

Full Stack and Systems: REST APIs, Spring Boot, Node.js, React, Next.js, Vue.js, PostgreSQL, Supabase, MongoDB, Docker, Kubernetes (GKE, OpenShift), Terraform, GitHub Actions CI/CD, AWS, Azure

Languages Spoken: French (fluent), English (fluent), Sign Language (intermediate)

PROJECTS

Multi-Agent AI Pipeline | Specialized agents — *Graph orchestration, function calling*

- Built a pipeline where specialized agents (researcher, executor, validator) collaborate dynamically in a graph rather than a rigid sequence.
- Implemented strict state management and function calling so each agent safely queries external tools, validates outputs against schema constraints and self-corrects on errors; ran independent tasks asynchronously and added strict loop limits to control latency and API costs.

The Art of Consistency | SaaS product with real users, theartofconsistency.app — *Solo Founder & Developer*

- Built and shipped a full-stack bilingual product solo (Next.js, TypeScript, Node.js, PostgreSQL) with Google OAuth, Stripe payments and webhooks, and Chart.js dashboards.
- Built two AI features on the Claude API (vision OCR, LLM-driven weekly evaluation) and developed with Claude Code and Codex guided by a maintained CLAUDE.md; verified agent output against sources and redirected agents when they were wrong.
- Iterated from real user feedback: fixed UI inconsistencies and simplified screens; gated changes with Jest tests and GitHub Actions CI/CD.

C++ Projects | Concordia University, first year — *C++*

- Built a hierarchical file system simulator (custom classes, smart pointers, directory tree) and a lightweight key-value store (raw pointers, binary files for persistent storage).
- Diagnosed an intermittent segmentation fault: a shallow copy in a custom copy constructor caused a double free when parent nodes released already-freed child pointers.

Campus Events Application | Backend project — *Python, FastAPI, PyTest*

- Wrote unit and integration tests with PyTest (REST endpoints, permissions, test SQLite database, pytest-mock), enabling an authentication middleware refactor without breaking routes.

Banking Web Application | REST API — *Java, Spring Boot, React*

- Built a REST API with CRUD operations, endpoint design, data validation, exception handling and relational database integration, with unit and integration tests.

Software Engineering Course Project | Java, Cucumber, Docker — *Team Lead*

- Led a team of 4 through an agile cycle with code reviews; wrote BDD acceptance tests with Cucumber and containerized the app with Docker.

Cloud-Native Microservices Platform | DevOps *Docker, Kubernetes, GKE, OpenShift, Terraform*

- Containerized microservices, deployed them to GKE with Terraform, migrated to Red Hat OpenShift, and built GitHub Actions pipelines; debugged pods to root cause.

EXPERIENCE

Freelance UI Developer | Chrisland Engineering *Riipen project*

- Designed and built the UI/UX screens of the company's application in JavaScript through a freelance project on Riipen.

Supervisor | Metro *Sept 2025 to Present*

- Coordinate the team, solve problems in real time, and handle cash counting, deposits and closing with accuracy and attention to detail.

Computer Science Content Creator | Self-employed *TikTok, 1,000+ followers*

- Create educational computer science content that explains technical ideas clearly to a non-technical audience.

EDUCATION

Concordia University, Montreal, QC | BSc, Computer Science *Jan 2024 to Expected Dec 2026*

Coursework: Data Structures & Algorithms (A+), Software Engineering, Databases, Web Development, Introduction to Artificial Intelligence, Operating Systems, Networking
