Chris-Robby Twungubumwe

Junior Full Stack Developer | Java, Spring Boot, REST APIs, TypeScript, SQL
Montreal, QC | chrisrobby38@gmail.com | (514) 944-5441
linkedin.com/in/chris-robby-twungubumwe | github.com/chris-robby | theartofconsistency.app
Canadian Citizen | Fluent in French and English | Based in Montreal

SUMMARY

Computer Science student (BSc, graduating December 2026) with over two years of full stack development through academic and personal projects: REST APIs in Java and Spring Boot, independently deployed microservices communicating over REST, relational databases (MySQL, PostgreSQL), and TypeScript/JavaScript front ends with HTML and CSS. Writes unit and integration tests, takes part in code reviews and agile work, and documents clearly. Eager to learn, open to feedback, and fluent in French and English.

TECHNICAL SKILLS

Backend: Java, object-oriented programming, Spring Boot (dependency injection), REST APIs, microservices, JSON, Node.js (Express), Python (FastAPI), C# and ASP.NET

Frontend: TypeScript, JavaScript, HTML5, CSS3, React (web and mobile), Vue.js, Next.js, responsive interfaces, UI/UX design

Databases: SQL, MySQL, PostgreSQL, Supabase, MongoDB, relational data modeling, query writing

Testing: Unit and integration testing (Jest, PyTest, pytest-mock), BDD acceptance testing (Cucumber), debugging and bug fixing

DevOps and Cloud: Git (branching, pull requests, code reviews), GitHub, Azure DevOps, Visual Studio, CI/CD (GitHub Actions, PowerShell), Docker, Kubernetes (GKE), OpenShift, Terraform, AWS, Microsoft Azure

Practices: Agile development, code reviews, technical documentation (README), software development lifecycle

Languages Spoken: French (fluent), English (fluent), Sign Language (intermediate)

PROJECTS

Banking Web Application | Full stack, REST API — *Java, Spring Boot, React*

- Built a REST API in Java and Spring Boot with CRUD operations on transactions, balances and user data, including endpoint design, data validation and exception handling.
- Integrated the API with a relational database and used Spring Boot dependency injection for a modular, testable design.
- Wrote unit and integration tests, and connected a React front end to the backend through the REST API.

Digital Library for a Choir | Microservices, real project, 30+ members — *Vue.js, Supabase, REST APIs*

- Designed independently deployed services that integrate with each other over REST: authentication, storage (scores and audio), an admin spreadsheet-style overview, and a member view tracking each member's contribution.
- Used by 30+ choir members; result: time saved, efficiency, consistency and unity.

The Art of Consistency | Full stack SaaS with real users, theartofconsistency.app — *Solo Founder & Developer*

- Built a full stack bilingual product (Next.js, TypeScript, Node.js, PostgreSQL) with Google OAuth, Stripe payments and webhooks, and Chart.js dashboards; front end consumes the backend through REST APIs.
- Iterated from real user feedback to fix UI inconsistencies and simplify screens; validated changes with Jest tests and CI/CD pipelines.
- Started as Blueprint, a mobile application built with React, before evolving into the current web product.

touchgrass | Bilingual site, chris-robby.github.io/touchgrass — *TypeScript*

- Built a TypeScript website that retrieves free activities in Montreal from the web and refreshes every morning, with a mobile-friendly swipe-style discovery page and bilingual content.

Cloud-Native Microservices Platform | Microservices and DevOps — *Docker, Kubernetes, GKE, OpenShift, Terraform*

- Containerized microservices with Docker, deployed them to Google Kubernetes Engine with Terraform, migrated them to Red Hat OpenShift, and automated builds and deployments with GitHub Actions.

Campus Events Application | Backend project — *Python, FastAPI, PyTest*

- Wrote unit and integration tests with PyTest (REST endpoints, permissions, test SQLite database, pytest-mock), enabling an authentication middleware refactor without breaking routes.

Software Engineering Course Project | Java, Cucumber, Docker — *Team Lead*

- Led a team of 4 through an agile cycle (planning, development, reviews, delivery) in Java; wrote BDD acceptance tests with Cucumber and containerized the app with Docker.

EXPERIENCE

Freelance UI Developer | Chrisland Engineering *Riipen project*

- Designed and built the UI/UX screens of the company's application in JavaScript through a freelance project on Riipen.

Supervisor | Metro *Sept 2025 to Present*

- Coordinate the team, solve problems in real time, communicate with customers, and handle cash counting, deposits and closing with accuracy and attention to detail.

EDUCATION

Concordia University, Montreal, QC | BSc, Computer Science *Jan 2024 to Expected Dec 2026*

Coursework: Data Structures & Algorithms (A+), Software Engineering, Databases (SQL, MySQL), Web Development, Operating Systems, Networking, Introduction to Artificial Intelligence
