Chris-Robby Twungubumwe

Junior Software Developer | C++, C#/ASP.NET, React, TypeScript, Python
Montreal, QC | chrisrobby38@gmail.com | (514) 944-5441
linkedin.com/in/chris-robby-twungubumwe | github.com/chris-robby | theartofconsistency.app
Canadian Citizen | Fluent in French and English | Based in Montreal

SUMMARY

Computer Science student (BSc, graduating December 2026) with over two years of hands-on development across C++, C#/ASP.NET, Java, Python, TypeScript/JavaScript and React. Builds, tests and documents software through the full lifecycle, from specifications to code, testing and deployment on Azure, AWS and Google Cloud. Detail-oriented, comfortable working independently or in a team, and fluent in French and English.

TECHNICAL SKILLS

Languages: C++, C#, Java, Python, TypeScript, JavaScript, SQL, PowerShell, shell scripting; object-oriented analysis, design and programming; data structures and algorithms (A+)

Web and Mobile: React (web and mobile application), ASP.NET, Next.js, Vue.js, Node.js, REST APIs, JSON, HTML/CSS, Spring Boot, FastAPI, UI/UX design

Databases: SQL, MySQL, PostgreSQL, Supabase, MongoDB, relational database design

Cloud and DevOps: Azure DevOps, PowerShell (CI/CD pipelines), Microsoft Azure, AWS, Google Cloud (GKE), Docker, Kubernetes, Red Hat OpenShift, Terraform, GitHub Actions CI/CD

Testing and Quality: Unit testing (Jest, PyTest), integration testing, BDD acceptance testing (Cucumber), code reviews, debugging, technical documentation (README)

Process and Tools: Visual Studio (daily use), Azure DevOps (team collaboration), software development lifecycle, agile, Git (branching, pull requests, code reviews), GitHub, Linux and Windows environments

Languages Spoken: French (fluent), English (fluent), Sign Language (intermediate)

PROJECTS

The Art of Consistency | SaaS product with real users, theartofconsistency.app — *Solo Founder & Developer*

- Turned user needs into a full-stack bilingual product (Next.js, TypeScript, Node.js, PostgreSQL) with Google OAuth, Stripe payments and webhooks, and Chart.js dashboards.
- Iterated from real user feedback: fixed UI inconsistencies and simplified screens; validated changes with Jest tests and CI/CD pipelines run with PowerShell and GitHub Actions.

Blueprint (first version of The Art of Consistency) | Mobile application — *React*

- Built the initial version of the product as a mobile application using React before evolving it into the current full-stack SaaS.

C++ Projects | Concordia University, first year — *C++*

- Built a hierarchical file system simulator (custom classes, smart pointers, directory tree) and a lightweight key-value store (raw pointers, binary files for persistent storage).
- Diagnosed an intermittent segmentation fault: a shallow copy in a custom copy constructor caused a double free when parent nodes released already-freed child pointers.

C# and ASP.NET Web Project | University project — *C#, ASP.NET*

- Built a complete web project in C# and ASP.NET applying object-oriented design principles, developed in Visual Studio.

Cloud-Native Microservices Platform | Deployment and DevOps — *Docker, Kubernetes, GKE, OpenShift, Terraform*

- Containerized microservices, deployed them to Google Kubernetes Engine with Terraform, migrated them to Red Hat OpenShift, and automated deployments with GitHub Actions; debugged pods to root cause.

Banking Web Application | REST API — *Java, Spring Boot, React*

- Built a REST API with CRUD operations, data validation, exception handling and database integration, with unit and integration tests and a React front end.

Digital Library for a Choir | Real project, 30+ members — *Vue.js, Supabase, REST APIs*

- Designed independently deployed services communicating over REST (authentication, storage, admin view, member view); used by 30+ choir members, saving time and improving consistency.

Campus Events Application | Backend project — *Python, FastAPI, PyTest*

- Wrote unit and integration tests with PyTest (REST endpoints, permissions, test SQLite database, pytest-mock), enabling an authentication middleware refactor without breaking routes.

Software Engineering Course Project | Java, Cucumber, Docker — *Team Lead*

- Led a team of 4 through an agile cycle from requirements to delivery, with code reviews; wrote BDD acceptance tests with Cucumber and containerized the app with Docker.

EXPERIENCE

Freelance UI Developer | Chrisland Engineering *Riipen project*

- Designed and built the UI/UX screens of the company's application in JavaScript through a freelance project on Riipen.

Supervisor | Metro *Sept 2025 to Present*

- Coordinate the team, solve problems in real time under time pressure, and handle cash counting, deposits and closing with accuracy and attention to detail.

EDUCATION

Concordia University, Montreal, QC | BSc, Computer Science *Jan 2024 to Expected Dec 2026*

Coursework: Data Structures & Algorithms (A+), Software Engineering, Databases (SQL, MySQL), Web Development, Operating Systems, Networking, Introduction to Artificial Intelligence
