Canadian Citizen | Fluent in French and English | Based in Montreal

SUMMARY

Computer Science student (BSc, graduating December 2026) with over two years of software development and programming, including Python backends tested with PyTest and behaviour-driven acceptance tests written in Gherkin with Cucumber. Manages codebases with Git and builds CI/CD pipelines, deploys with Docker and Kubernetes, and turns user needs into working solutions. Explains technical decisions clearly to non-technical people, as a solo founder supporting real users and a team supervisor. Fluent in English and French; legally able to work in Canada.

TECHNICAL SKILLS

Programming: Python (FastAPI), Java, C++, C#, TypeScript, JavaScript, SQL, shell scripting, PowerShell; object-oriented design, data structures and algorithms (A+)

Testing and TDD: PyTest (fixtures, pytest-mock), Gherkin and Cucumber (BDD acceptance tests from requirements), Jest, Playwright, unit and integration testing

Codebase and Pipelines: Git (branching, pull requests, code reviews), GitHub, Azure DevOps, CI/CD pipelines (GitHub Actions, PowerShell), Google Artifact Registry

Infrastructure: Linux/Unix environments, Docker, Kubernetes (GKE manifests, autoscaling, load balancing), Red Hat OpenShift, Terraform, AWS, Microsoft Azure, Google Cloud

Data: Relational database modelling, PostgreSQL, MySQL, Supabase, MongoDB, REST APIs, JSON, Apache Kafka

Languages Spoken: English (fluent), French (fluent), Sign Language (intermediate)

PROJECTS

Campus Events Application | Python backend, test-driven *Python, FastAPI, PyTest*

- Wrote unit and integration tests with PyTest for REST endpoints, permission checks and database interactions, using fixtures for a test SQLite database and pytest-mock to isolate external API calls.
- The test suite let me refactor the authentication middleware without breaking any routes.

Software Engineering Course Project | Java, Gherkin/Cucumber, Docker *Team Lead*

- Led a team of 4 through an agile cycle: captured requirements, wrote Gherkin scenarios and Cucumber acceptance tests to validate each feature against them, ran code reviews and containerized the app with Docker.

The Art of Consistency | SaaS with real users, theartofconsistency.app *Solo Founder & Developer*

- Captured needs from real users and delivered a full stack product (Next.js, TypeScript, Node.js, PostgreSQL) with Google OAuth, Stripe payments and webhooks, and Chart.js dashboards.
- Managed user expectations and acted on feedback: fixed UI inconsistencies and simplified screens; every change validated with Jest tests in a CI/CD pipeline.
- Built two AI features on the Claude API (vision OCR, LLM-driven weekly evaluation).

Cloud-Native Microservices Platform | Pipelines and deployment *Docker, Kubernetes, GKE, OpenShift, Terraform*

- Containerized microservices, deployed them to Google Kubernetes Engine with Terraform and Kubernetes manifests, then migrated them to Red Hat OpenShift under enterprise security policies (Source-to-Image, Routes).
- Built CI/CD pipelines with GitHub Actions and Google Artifact Registry and debugged pods to root cause.

Real-Time Fleet Tracking and Pricing Engine | Simulation *Java, Apache Kafka*

- Simulated a fleet of about 100 drivers sending 20 to 30 requests per minute, with a consumer computing demand-based pricing in real time.

Digital Library for a Choir | Real project, 30+ members *Vue.js, Supabase, REST APIs*

- Worked with the choir to understand its manual process, then delivered independently deployed services over REST (auth, storage, admin view, member view); used by 30+ members, saving time.

Banking Web Application | REST API *Java, Spring Boot, React*

- Built a REST API with CRUD operations, data validation, exception handling, relational database integration, and unit and integration tests.

EXPERIENCE

Freelance UI Developer | Chrisland Engineering *Riipen project*

- Worked with the client to turn its needs into the UI/UX screens of its application, built in JavaScript, through a freelance project on Riipen.

Supervisor | Metro *Sept 2025 to Present*

- Coordinate the team, solve problems in real time, and communicate with customers to resolve their issues with patience and clarity.

EDUCATION

Concordia University, Montreal, QC | BSc, Computer Science *Jan 2024 to Expected Dec 2026*

Coursework: Data Structures & Algorithms (A+), Software Engineering, Databases (SQL, MySQL), Operating Systems, Networking, Introduction to Artificial Intelligence; physics courses (built electromagnetic-motor cars), MAIE 215 (mechanical engineering)
